Acceptance tests

Open tasks

task9

Build the layout

Description

Locate the content to the corresponding places.

task10

Add gesture, navigation drawer

Description

Control the functions by gesture, navigation drawer, long press, etc. so as to simplify the operation of the app.

story9

programming

3/54 hrs. (6%),
40 SP

Story description

The implementation of main features as well as the extra features

Acceptance tests

Open tasks

<i>tsk13</i>	searching feature
<i>Description</i> The search function that allow search notes by name and content.	
<i>tsk14</i>	Sort by feature
<i>Description</i> Sort the notes by colour tags, create time and my favorite.	
<i>tsk15</i>	share feature
<i>Description</i> Share the notes to friends via other communication software eg. facebook, whatsapp.	
<i>tsk16</i>	To do and alarm
<i>Description</i> Use alarm to remind user their about notes by several ways to prevent users forget their notes.	
<i>tsk17</i>	combining the code of the main functions to the layout built
<i>Description</i> Combine the code to ensure the apps can operate. If success, we will further add the extra features. This require more time as bugs may exist.	
<i>tsk18</i>	Add font selection
<i>Description</i> By selecting different color or underline the keywords that are important can greatly improve the expression of notes. So it is a valuable feature that we hope to add.	
<i>tsk19</i>	handwriting
<i>Description</i> handwriting is the most natural way to take notes. However it is the most challenging work for us.	
<i>tsk20</i>	multimedia
<i>Description</i> Make notes with pictures or record sound. This is also amazing and useful to copy notes at short period of time. For examples by taking a photo and import it into the notes. Importing recording into notes is also efficient.	
<i>tsk21</i>	Combine all extra features
<i>Description</i> Combine all features added to see whether it can run properly. Assign more spare time for debugging
